

Water Management Policy

Indian scriptures / Vedas narrate the importance of water for existence. The following Hymn from Rig Veda describes the reverence to Water.

“आपो हि ष्टा मयोभुवस्था न ऊर्जे दधातन ।महे रणाय चक्षसे ॥

Water, because of your presence, the Atmosphere is so refreshing and imparts us with vigour and strength”

In line with the above, BMRCL believes that water is a critical resource which should be preserved. BMRCL contributes to the cause by adopting sustainable water management solutions. BMRCL employs better technologies to recycle and reuse water.

BMRCL shall strive to

- ❖ Incorporate water efficiency measures in all designs to ensure potable water and non-potable water savings are realized.
- ❖ Treat water through water treatment systems, Sewage Treatment Plant (STP) and Effluent Treatment Plant (ETP) and reuse it within its campus for gardening, cleaning toilets and flushing.
- ❖ Account for the water footprint of the BMRCL with water audit at all stations and depots.
- ❖ Organize rainwater-harvesting facilities to retrieve water for reuse.
- ❖ Implement measures to conserve water in BMRCL's properties, unharmed the water sources and comply with legislations of the state.
- ❖ Spread water conservation awareness amongst Public, Employees and Stakeholders to build a society having strong intent for water conservation.
- ❖ Reduce water pollution.

We commit to play an important role in conserving, recycling and reusing water, which is a precious resource.
